A few considerations...

- Our lead-time runs approximately 10-12 weeks after final design approval, this is a general estimate so please contact us for our most up to time line.
- All of our kitchens are custom; made directly for you by us so they are not average in cost or quality. To offer a general sense of costing our cabinetry for most kitchens ranges from \$25,000 to \$40,000 and this does not include counter tops, appliances, or installation. It is not uncommon for clients to invest two to three times that depending on the scope and scale of the project

There are few things you can do to speed up the process...

- Sketch out your room, including windows, doors, and any other architectural elements.
- Start in one corner and begin measuring around your room, provide a measurement to the first thing in your sketch and then move on to the next (when measuring doors and windows be sure to measure from the outside edge of the casing—the trim around your doors and windows). Use a steel tape measure to get the most accurate measurements.
- Check your work by adding up the measurements along each wall—this measurement should equal the overall length of the wall.
- Next take a floor to ceiling height in each corner of your room—this doesn't have to happen tight to your corner, a few feet out is sufficient.
- Get together a list of your appliances brand/ model or sizes. This is to provide the most comprehensive plan as possible.

By providing the above information (or pre-designed architectural plans) we will discuss with you your ideas for your kitchen and provide a budget estimate. If you have any questions please [e-mail or contact us](#)—we are happy to help and look forward to sharing in your excitement.
